V. R. SHETH
MANAGING DIRECTOR

COMPANY PROFILE

Mr. V. R. Sheth, The Managing Director of Associated Engineers, Having Passed B.E. Mechanical from University of Bombay in 1971, took Experience in an Electrical Components manufacturing company, for a period of four years. In 1975 he joined as a Technical Director in a Pvt. Ltd Company and then founded Associated Engineers in 1980.

Now with the total experience of about 35 years, we at Associated Engineers are manufacturing all varieties and sizes of Tinned Copper cable Lugs, Lugs and Links, Aluminum Lugs and Links, Insulated / Non-Insulated Terminal Lugs, DIN/MCB-Rails, Earth Rod and Earthing Accessories and Allied Electrical Products. We manufacture large variety of components to customer Drawings and Specifications.
Our Trade name is **" JOINTWELL".**

Since 1995 first time in India we started manufacturing
Copper Aluminum **Bi-Metal** Lugs and Connectors (links).Bi-Metal Lugs are Manufactured by Process known as **Friction Welding**. Also we are the first manufacturer who had introduced concept of Reverse Bi-Metallic Lugs. From India first time such Reverse Bi-Metal lugs was manufactured and exported by us. To manufacture Bi-Metal Lugs and Links we have in house facility.

Our products are being exported to many countries, through Indian Merchant exporters, Export Houses and Exported directly by Associated Engineers. Our products have found acceptance in Dubai, Kuwait, Oman, Doha Qatar, Jeddah, Saudi Arabia, Bahrain, Jordan, Singapore, Malaysia, Brunei, Hong Kong, Mexico, Venezuela, Rio Haina, Brazil, Sri Lanka, Bangladesh, UK, Romania, New York, New Zealand, Dominican Republic, South Africa, Kenya, Bulgaria, Peru, Mombassa, Guatemala, Al-Salvador and many more countries.

At home we have large number of OEMs who are our satisfied customers. We have a pleasure to inform that till today we have retained our first customers who used to buy material since1980. It spells about our quality. However now we have put our quality system on records by way of ISO 9001-2000 certification.

JOINTWELL

BI METAL TERMINAL LUGS AND BI METAL CONNECTORS

Whenever aluminium cable is to be terminated on copper bus bar or copper contact, if aluminium lug is used then contact between terminal lug and copper bus bar being of dissimilar metals, galvanic action takes place. Also if copper lug is used then contact between aluminium cable and barrel of copper terminal lug is of dissimilar metal and hence the galvanic action takes place. In order to prevent dissimilar contact and to avoid galvanic action it is always advisable to use copper aluminium Bi-Metal lugs. In Bi-Metal lugs barrel of the lug is of aluminium and the head or palm of the lug is of copper. This ensures contact between aluminium cable to terminal lug is of aluminium and contact between terminal lug to copper bus bar or contact is of copper. Thus contact between dissimilar metal is avoided and contact between similar metal is established. Thus Bi-Mettalic or galvanic action is completely eliminated and hence technically sound and durable joint is achieved.

Electrolytic copper head / palm is friction welded to electrolytic aluminium barrel. At the interface, copper molecules and aluminium molecules intermingles with each other and form durable bond.

Similarly if aluminium cable is to be joined with copper cable then Bi-Metal in line connectors are to be used. Here for aluminium cable aluminium barrel is provided and for copper cable copper barrel is provided. Copper and aluminium barrels are friction welded.

Depending upon application Bi-Metal terminals, in line connectors, pin type connectors etc are manufactured.

Note : In case if copper cable is to be terminated on aluminium bus bar / aluminium contact, then reverse Bi-Metalic lugs can also be manufactured against specific order. In reverse Bi-Metal lugs barrel is of copper and head is of aluminium.

TWIN INSULATED BOOT LESS PIN TERMINALS

The twin wire Boot Less Pin Terminal range is specially designed to terminate 2 wires in the sameterminal. With the development of smaller switches & devices, housings have beome smaller.The twin wire Boot Less Pin Terminal solves these Problems in a quick and easy way.

MATERIAL : ELECTROLYTIC COPPER BS 1977 / IS 191 (PART V)
FINISH : ELECTRO TINNED

Size 0.5 mm2 to 6 mm2 are available with colour coding

INSULATED END SEALING FERRULES / BOOTLACE PINS PROVIDE NEAT END TERMINATION OF MULTI STRANDED WIRES AND REDUCES THE RISK OF WIRE STRAND SHORT CIRCUITING TO THE ADJUSANT TERMINATION. THE END SEALING FERRULES ARE MANUFACTURED FROM HIGH CONDUCTIVITY COPPER TUBES AND INSULATED WITH POLY PROPYLENE SLEEVES. THE INSULATING SLEEVES OVERLAPE THE INSULATION TO COVER EXPOSED AREA OF CONDUCTORS. TABLE SHOWS FERNCH & GERMAN PREFFERED COLOURS.

BIGGER SIZE CAN BE MANUFACTURED AGAINST SPECIFIC REQUIRMENT

THE END SEALING FERRULES / BOOTLACE PINE ARE SUITABLE TO USE IN TERMINAL BLOCKS AND CAPTIVE TERMINALS.

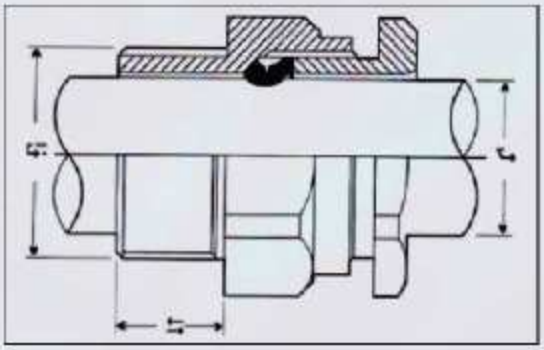
CABLE GLANDS - TYPE A2



APPLICATION :
IN OUTDOOR OR INDOOR WITH
UNARMOURED LEAD SHEATHED
UNARMOURED OR BRAIDED CABLE.

FUNCTION :
A2 GLANDS OFFER A DUSTPROOF SEAL
ON TO THE OUTER SHEATH OF
AN UNARMOURED, OR BRAIDED CABLE

STANDARD : BS 6121, PART 1, 1989
MECHANICAL : IMPACT RESISTANT
SIZE : A2 20S - 75L
MATERIAL : BRASS / ALUMINIUM
FINISH : MATT / NICKLE
GASKET : NEOPRENE
SHROUDS : PVC / LSF

EARTH ROD AND EARTH ROD ACCESSORIES

COPPER BONDED EARTH ROD:

COPPER BONDED EARTH RODS ARE BEST AND MOST ECONOMICAL EARTH RODS. THEY ARE MADE BY MOLECULARLY BONDING 99.9% ELECTROLYTIC COPPER ONTO HIGH TENSILE LOW CARBON STEEL OF BS 4360 GRADE A. THE RODS ARE HIGHLY RESISTANCE TO CORRIOSSION AND BECAUSE THE STEEL USED HAS VERY HIGH TENSILE STRENGTH, THE RODS CAN BE DRIVEN BY POWER HAMMERS TO GREATER DEAPTHS.THE THREADS ON COPPER BONDED STEEL EARTH RODS ARE FORMED BY ROLL THREADING AND THERE IS 'BUILT-IN' DRIVING TIP. THE ROLL THREADS PROVIDE EXTRA STRENGTH WHEREBY RISK OF CHIPPING WHILE DRIVING RODS IN GROUND IS ELIMINATED

SOLID COPPER EARTH RODS ARE MANUFACTURED IN BOTH THE TYPES WITH EXTERNAL THREADS AND INTERNAL THREADS. THE RODS ARE USED WHERE SOIL CONDITIONS ARE VERY AGGRESSIVE AND CORROSION IS VERY HIGH SUCH AS SOILS WITH HIGH SALT CONTENT.COPPER RODS GIVES EXCEPTIONALLY LONG LIFE.THE RODS ARE MANUFACTURED FROM HIGH CONDUCTIVITY HARD DRAWN COPPER TO BS 2874-C101.

FITTINGS :

1) DRIVING HEAD & DRIVING SPIKE ARE MADE OUT OF HIGH TENSILE STRENGTH STEEL.
2) INTERNAL COUPLING IS MADE FROM PHOSHPER BRONZE OR HIGH TENSILE BRASS DOWEL AND EXTERNALLY THREADED.

ELECTRICAL CONDUCTIVE GREASE

High Temperature, Conductive Anti-Corrosive Electrical Joint Compound For Installation of Aluminium Conductors Using Aluminium Lug or Copper-Aluminium Bimetal Lugs.

This Compound has metallic particles which helps in breaking oxide film at the time of crimping,whereby intimate metal to metal contact between terminal and conductor is established as a result lower contact resistance at the joint and it helps in sealing air and moisture effect to the joint
